

Dry Riser Installation – Greater Manchester, Stockport

Location: King Street West, Stockport

Project: Dry Riser Installation

Client: Part of the Town Centre West Regeneration Scheme

Scope: 2 Dry Riser Systems | 9 Outlets | 12 Metres Feed Pipework

Sector: Residential & Commercial Mixed-Use Development

Project Overview

Dry Risers Direct recently completed a dry riser installation in the heart of Stockport, Greater Manchester, as part of the ambitious Mayoral Corporation Town Centre West regeneration zone. This strategic development is one of the most significant in the North West, aiming to deliver 3,500 new homes and over 1 million sq. ft. of commercial space — all designed to breathe new life into Stockport's urban landscape.

Our role was pivotal in ensuring the fire safety infrastructure was in place for this next-generation community hub. Tasked with installing two complete dry riser systems, we delivered a solution tailored to meet the high demands of both our client and their stakeholders.

The Challenge

For many developers and site managers, a dry riser installation is unfamiliar territory — and this project was no exception. As is often the case, we provided not only expert installers but also acted as specialist partners to guide the client through the entire process.

Our brief included:

- Clear communication with multiple stakeholders
- Seamless integration with ongoing construction phases
- Strict adherence to Health & Safety standards and BS9990:2015 compliance
- Timely delivery within a fast-moving regeneration schedule

We designed and installed:

- 2 full dry riser systems
- 9 outlet valves
- 12 metres of feed pipework, routed with minimal disruption

From start to finish, our focus was on quality workmanship, regulatory compliance, and operational transparency. Every component was installed to meet British Standards, with all

relevant Certificates of Compliance and detailed Operations & Maintenance (O&M) documentation provided upon completion.

Why Choose Dry Risers Direct?

At Dry Risers Direct, we pride ourselves on being more than just installers. We're problem solvers — known for stepping in when projects are complex, time-sensitive, or require a deeper level of expertise.

Whether you're facing tight site constraints or navigating fire safety compliance for the first time, we make the process clear, simple, and fully supported.

- ✓ Full UK Nationwide Coverage
- ✓ BS9990:2015 Compliance Assured
- ✓ Certified Installers & Inspectors
- ✓ Fast Turnaround & On-Site Support
